ABOUT ME

I am a Senior Software Engineer with 12 years of experience in full-stack and backend development for mission-critical systems. I possess a strong foundation in building scalable microservices, API development, and cloud infrastructure. Recently, I have focused heavily on Generative AI, gaining hands-on experience integrating LLMs into web applications using Python, Vector Databases, and RAG architectures. I am eager to leverage my engineering maturity and AI skills to build innovative GenAI solutions.

KEY COMPETENCES

- **Programming Languages:** Python (FastAPI, Backend Services), Java (12+ years), SQL, Bash
- **Generative AI & LLMs:** RAG Architecture, Context Engineering, Embeddings, Agentic Workflows, Multi-Agent Orchestration, LLM Integration (GPT, Gemini)
- **Cloud & DevOps:** AWS (Bedrock, Lambda, S3), Kubernetes, Docker, CI/CD (Jenkins), IaC (Terraform)
- **Backend Development:** Microservices Architecture, REST API, Scalability, Fault Tolerance, Observability (Kibana)
- **Data & Storage:** PostgreSQL, Vector Databases (integration, retrieval)
- **Development Tools:** Git, IntelliJ, pip, uv
- **AI-Assisted Workflows:** Claude Code, Antigravity, Github Copilot
- **Methodologies:** Agile (Scrum, Kanban), Code Review, Knowledge Sharing

WORK EXPERIENCE

09.2024 – 10.2025 **Senior Software Engineer, Jacobs**

Project: PA Consulting – Client: UK Home Office – developed a highly regulated visa processing system. Focused on backend API design, CI/CD automation and implemented deterministic document parsing for automated data ingestion.

Tech stack: Java, Python, SQL, Jenkins, Microservices, Kibana, Kubernetes

03.2023 – 08.2024 **Senior Software Engineer, Motorola Solutions**

Project: Dimetra Connect. Built secure backend services for mission-critical communications.

Tech stack: Java, Python, Bash, TLS, Public Key Infrastructure

01.2021 – 02.2023 **Senior Software Engineer, Motorola Solutions**

Project: A component for routing calls between Dimetra and LTE audio systems. Focused on high availability, fault tolerance, and comprehensive automated testing frameworks.

Tech stack: Erlang, Jenkins, Common Test Framework

- 02.2017 – 12.2020 **Senior Software Engineer, Motorola Solutions**
Project: A web application for scanning and monitoring the Astro and Dimetra systems
Tech stack: Java 8, Spring, Angular & TypeScript, Kotlin, Jenkins, PostgreSQL
- 04.2014 – 01.2017 **Software Engineer, Motorola Solutions**
Project: A fault manager for the Astro and PSLTE systems. Ensured high reliability and defect resolution for critical monitoring components.
Tech stack: Java 6 – 7, Swing
- 09.2012 – 06.2014 **Java Developer, AGH University of Science and Technology**
Project: A fault manager for the Astro and PSLTE systems. Contributed to core feature development and requirement analysis.
Tech stack: Java

EDUCATION

- 2005 – 2011 **AGH University of Science and Technology**
Master's degree of Computer Science, EAI department, part-time course of study.

LANGUAGES

- Polish – native
- **English – B2+**/professional working proficiency; daily written and spoken communication with UK-based teams

PROJECTS

- **AI-Powered Professional Profile Agent – Digital Twin** – twin.kamilkuchta.pl
Developed a RAG-based intelligent system acting as a digital twin.
Designed backend APIs to orchestrate LLM responses, manage domain-specific data, and optimize prompts.
Tech: Python, FastAPI, AWS (Bedrock, Lambda, S3), GitHub Action
- **Equity Valuation Agent** – (AWS migration in progress)
Designed and implemented a multi-agent AI pipeline that automates equity due diligence
Tech: Python, LangChain, LangGraph, ChromaDB, AWS (Bedrock, S3, Lambda, Fargate), Terraform
- **YouTube Transcript to Infographic Generator**
Automated content processing pipeline integrating Gemini API.
Tech: Python, Luigi, Gemini API, Prompt Engineering
